PRIVATE PLATFORMS MAY FACE TIGHTER COMPLIANCE

DPDP: Easier rules likely for govt depts

OJASVI GUPTA
New Delhi, March 18
GOVERNMENT MINISTRIES AND departments are unlikely to be classified as significant data fiduciaries (SDFs) under the Digital Personal Data Protection (DPDP) Act, signalling a lighter compliance framework for public authorities even as stricter obligations are expected to apply to large private sector platforms, officials aware of the discussions said.

PROTECTING DATA

Govt ministries in India unlikely to be classified as significant data fiduciaries (SDFs)

If classified as SDF, extra obligations include:
- Appointing a Data Protection Officer
- Conducting regular data audits
- Implementing stronger safeguards and risk controls

Officials from the ministries of home affairs, mines, heavy industries, and AYUSH, along with the department of posts, department of pharmaceuticals, the Defence Research and

Development Organisation, and the department for promotion of industry and internal trade. According to sources, the government does not, at this stage, intend to notify the ministries or departments under the SDF category despite the scale of personal data handled by these entities. Instead, the designation is expected to be applied primarily to large private-sector entities such as social media platforms, e-commerce marketplaces and technology service providers that process significant volumes of personal data. Under the Act, entities classified as SDFs are subject to additional compliance requirements, including the appointment of data protection officers, periodic data audits and the implementation of enhanced safeguards. The law allows the Centre to notify such entities based on factors such as volume and sensitivity of data processed, risks to individuals' rights and the potential impact on sovereignty and integrity. Officials, however, indicated that the option of classifying government entities as SDFs remains open and could be exercised in specific cases if required. Discussions also touched upon the allocation of responsibility for data handling within the government ecosystem. Officials from the National Informatics Centre indicated that the organisation functions largely as a data processor, managing infrastructure on behalf of ministries rather than determining the purpose and means of processing.

Playbook Partners eyes 5-7 deals in FY26

S SHANTHI
Bengaluru, March 18

Playbook Partners, a venture capital firm, is expected to continue to prioritise valuation discipline even as it looks to close 5-7 investments in FY26, focusing on consumer-facing businesses and technology-led disruptors. The firm, launched in 2024, operates in the post-venture capital, pre-control buyout space and targets companies with over \$25 million in revenue, improving profitability and a clear three-to-five-year path to public markets. "We remain cautious about valuation discipline, particularly in aggressively priced private rounds or fully priced secondaries without adequate liquidity," Founder and Managing Partner Vikas Choudhury told ZEE5. "Capital preservation is as important as capital deployment." Playbook typically builds a concentrated portfolio of 12-14 firms over its core investment period, translating into about 5-6 deals annually during active deployment. It expects to remain within that range over the current and next financial year. So far, the firm has backed companies such as Renee Cosmetics, Capillary Technologies and EverBrands. Its investment strategy centres on two themes: India's consumption and distribution, and technology-led disruption with global potential. On the consumption side, Choudhury said rising incomes

and shifting preferences among younger consumers are driving demand for new-age and premium brands. "We see strong opportunities in omnichannel brands and scaled consumer platforms combining brand, data and operating discipline," he said. The second focus area includes software, artificial intelligence, deep tech and cleantech businesses building Indian talent, but serving global enterprises. "This disruption could even be global," he added. The firm typically invests \$10-20 million per company via a mix of primary and secondary transactions, and may combine fund capital with co-investments. It seeks meaningful minority stakes without pursuing control. "We like to be relevant, but not intrusive," he said.

Nazara to buy 2 Spanish gaming firms for \$100 mn

DIVERSIFIED GAMING AND sports media firm Nazara Technologies on Wednesday said its UK-based subsidiary will acquire a 50% controlling stake in Spanish social gaming platforms Blueleaf Games and BestPlay Systems for \$100.3 million (about €91.8 crore). Of the total cash consideration, \$59.7 million (about ₹54 crore) will be paid at the first close, while the remaining \$40.6 million is payable on the achievement of agreed revenue and Ebitda targets for calendar years 2027-2029 and payable between 2028 and 2030.

The transaction also includes performance-linked earn-outs estimated at \$98.2 million, which are contingent on the achievement of agreed revenue and Ebitda targets for calendar years 2027-2029 and payable between 2028 and 2030.

India uniquely placed, says Cognizant chief AI exec

INDIA HAS A "unique" position in AI enablement due to its deep technology foundation, diverse and large pool of people who understand digital systems and processes, according to Babak Hodjat, Chief AI Officer, Cognizant. Hodjat said that while AI tools are increasingly generating more and more codes, developers will still be required to build modular systems and evaluate the quality of outputs produced by AI. "So this is not going to go to waste... A coder using AI is going to be well ahead of a non-coder using AI," he said.

Artificial intelligence is empowering more professionals across fields, even though core tech expertise remains valuable, Hodjat believes. The recent India AI Impact Summit, held in New Delhi, showed the extent to which the country is prioritising artificial intelligence. "India has a unique position because they have a starting point that is ahead of everyone else. Because you have a tech-savvy population and you are building on solid ground, which is the technological foundation and that is what is going to drive AI enablement," he said. People who understand systems, processes and applications will play a key role in building AI systems and accelerating adoption across industries, he said adding "So I think this is a unique position". Citing India's deep knowledge base and rich culture of entrepreneurship, Hodjat termed it a strong start.
